

QUESTACON ENVIRONMENTAL MANAGEMENT POLICY

Our Organisation

The mission of Questacon - The National Science and Technology Centre is to increase awareness and understanding of science and innovation through inspirational learning experiences.

As a role model for the Australian Government to the wider community, Questacon recognises its responsibility to minimise the impact of its activities on the environment.

Our Commitment

Questacon's Environmental Management Policy covers all activities carried out by Questacon in the ACT.

This includes all transport, manufacturing and office based activities at Questacon Exhibition Services, 95-97 Wollongong Street Fyshwick and the National Science and Technology Centre on King Edward Terrace, Parkes.

Questacon is committed to continually reducing its impact on the environment in proportion to the scale of its activities.

Strategy

Through embracing a philosophy of 'rethink, reduce, reuse, repair, recycle' Questacon is committed to:

- Continuing to improve our Environmental Management System (EMS) by avoiding pollution where possible as well as reducing waste and the consumption of resources. Through our EMS, embrace improved practises which minimise our impact on the environment.
- Working closely with employees, contractors, suppliers, clients and other stakeholders to continually monitor and refine our work practises and activities to set and achieve agreed environmental objectives and targets.
- Complying with all relevant Commonwealth and ACT environment legislation, with the Commonwealth Governments' environmental policies and initiatives, and with any other environmental initiatives which Questacon voluntarily commits.
