

## **Transcription of Enterprising Australians video Solange Cunin**

### **Cuberider teaser**

The video for this transcript can be found at  
<https://youtu.be/-2MHt3NDYOM>

#### **Transcription from video:**

[Music playing in background]

[Solange is standing in front of a plain white background.]

Solange Hi, I'm Solange. I'm 23, and I created Cuberider.

[A waving cartoon hand appears on the right side of Solange, then a thought bubble with a cube labelled "Cube Rider" appears on her right]

The very first Australian space mission to the International Space station.

[Hand cartoon disappears, replaced with an outline of Australia. The Cube Rider drawing has rocket fins and flames added and 'flies' up the screen, cartoon stars and International Space Station appear in the background].

Cuberider's mission is to enable high school students around Australia

[Cube Rider image loses fins, gains superhero outfit. Background disappears, replaced by an outline of Australia with cartoon students inside].

to conduct experiments in space.

[Cartoon students are now on a space background, with another cartoon figure watching them from a cartoon spaceship].

On our first mission in 2016, over 1000 students from 60 schools around Australia

[Previous cartoons disappear. The words "Over one thousand students from over 60 schools around Australia" appear in the background, large crowd of cartoon students appear at bottom of screen]

learnt to code and do their own space experiments.

[Previous cartoons disappear. A cartoon student types at a computer on right hand side, binary numbers start flowing out of the computer to the left, where another student and a large beaker, both surrounded by stars, appear]

Growing up, I loved space and tinkering.

[Previous cartoons disappear. Cartoon of a heart-shaped planet with ring around it (resembling Saturn) and stars appear on the left. Cartoons of a battery, an electrical device with wires coming out of it, and a pair of pliers appear on the right]

Today, I combine these loves to inspire the next generation.

[Battery and heart-shaped planet combine into the Cube Rider cartoon, rest of cartoons disappear. Outline of Australia with celebrating students in it appears on the right]

If you have something that you're passionate about that inspires you,

[Previous cartoons disappear. Cartoon student holds up a heart, stars appear in background, cartoon student celebrates]

Anything is possible. Even rocket science.

[Cartoon student has a rocket come up from underneath it and lift up the screen, out of frame].
